ABSTRACT

The application, allocation, and enrollment of first-time, day-session, freshmen matriculants at the City University of New York during the period 1970-1974 are discussed. Utilizing centrally-available data, applicants are described in terms of their college admissions average (CAA), sex, the predominant race ethnicity and median family income of their New York City residential (zip code) area, and the type of New York City high school they attended. Only those who applied for admission through the University Applications Processing Center are included in the data. Several of the findings, especially the increase in application and enrollment among students with low CAAs and among students from predominantly minority and low-median family income areas, are consistent with previously reported findings. The full implications of these findings for university policy are limited by the descriptive nature of the data. Information on applicant awareness, perceptions, motivations, plans, and attitudes would permit more sophisticated and more meaningful analyses of the data. Statistical tables supporting the findings are included. (MSH)

C. CUNY Applicants and Enrollees Among June Graduates of New York City Public High Schools, 1973-1974..... 35

This report concerns the application, allocation, and enrollment of first-time, day session, freshmen matriculants at The City University of New York during the period 1970-1974. Utilizing centrally-available data,[1] applicants are described in terms of their college admissions average (CAA),[2] sex, the predominant race-ethnicity and median family income of their New York City residential (ZIP code) area,[3] and the type of New York City high school they attended.[4] Only those who applied for admission through the University Applications Processing Center (UAPC) are included in the data of this report.

APPLICATION

With the exception of 1973, the number of individuals applying to the day session of the senior colleges and the community colleges of CUNY increased in each year since 1970. As can be seen from the data of Table 1,* there were 17.2% more applicants to CUNY in 1974 than in 1970. (The numbers of applicants, by CAA and other characteristics, in each year between 1970 and 1974 are provided in Appendix A.) For comparative purposes, we have included in Table 1 data from 1969, the year prior to the onset of the implementation of the open admissions policy. This helps to illustrate the impact the open admissions policy

---

*Tables appear beginning with page 11.

has had on applications to the City University: from 1969 to 1970 the number of applicants to CUNY increased 27.2%; from 1969 to 1974, the increase was 49.2%. In terms of the attributes identified in Table 1, the greatest increase in applications between 1970 and 1974 occurred among those with low (under 70) CAAs (+49.0%), females (+26.9%), those from residential areas characterized as predominantly minority with low median family income population (+32.5%), and those from Group IV public high schools (+17.7%). During the period 1970-1974, the number of applicants from private Catholic and Jewish schools declined. (Additional data for each NYC public high school and for private high schools are contained in Appendices B and C.)

ENROLLMENT

The number of individuals enrolling at CUNY also increased (16.0%) from 1970 to 1974*. (See Table 2 and Appendix A.) As was the case for application, the greatest increase in enrollment occurred among those with low (under 70) CAAs (+52.3%), females (+28.6%), those from areas characterized as predominantly minority with low median family income (+42.8%), and those from Group IV public high schools (+32.0%). College admissions average and median

*The 1969 enrollment data by CAA, sex, and so on, are unfortunately not readily available centrally.

family income of residential area are both inversely related to the increase in application and in enrollment; that is, the lower the CAA and the lower the median family income of area, the greater the growth in application and in enrollment.

APPLICATION-ENROLLMENT

Well over one-half of those applying enroll in CUNY. The data are not especially revealing of trends over the 1970-1974 period.[5] (See Appendix A.) When the data were tabulated while controlling on two or more variables simultaneously, the following findings resulted:

1. CAA and College Level

Among applicants with high (≥80) CAAs, the proportion enrolled in 1974 (53.4%) was only slightly less than the proportion enrolled in 1970 (54.5%). As may be seen from the data of Table 3, however, the propotion enrolling at senior colleges steadily declined from 48.4% in 1970 to 41.7% in 1974, while the proportion enrolling at community colleges steadily increased from 6.0% in 1970 to 11.7% in 1974. Trends in the enrollment of applicants with low (<70) CAAs are not evident.

2. CAA, Sex, and College Level

The data of Table 3 are provided for all CAA categories and controlled on sex in Table 4. The decline in senior college enrollment and increase in community college enrollment among high CAA applicants is evident for both males and females. Among applicants with CAAs at or above 75, a higher proportion enrolled at senior colleges than at community colleges; among applicants with CAAs below 75, a higher proportion enrolled at community colleges than at senior colleges. This was the case for both males and females in all years.

With the exception of the low (<70) CAA applicants, a slightly higher proportion of the males than females enrolled at senior colleges; a slightly higher proportion of the females than males enrolled at community colleges. Moreover, for the high (≥80) CAA applicants, a higher proportion of females than males enrolled overall, in all years; this finding obtains even when controlling on predominant race-ethnicity and median family income of residential area. (See Table 6.)

3. CAA, Residential Area Characteristic and College Level

As may be seen in Table 5, the trend previously noted for high (≥80) CAA applicants -- declining senior college enrollment and increasing community college enrollment -- is true for those from predominantly white areas, regardless of their median family income. Those from predominantly minority areas show an increase only in community college enrollment.

Among applicants with low CAAs, those from predominantly minority areas were more likely to enroll at senior colleges than those from predominantly white areas.[6]

(The findings noted above obtain when controlling on sex. See Table 6.)

4. CAA and High School Type

The data in Table 7 show the number that applied and the percentage that enrolled by CAA and high school type: for example, 6,147 individuals with ≥80 CAA from public high schools in Group I applied in 1970; and 50.6% of them enrolled at CUNY.

In all years since 1970, higher proportions of the under 70 CAA applicants from Group I, private Catholic and private "other" high schools enrolled than the 80 and above CAA applicants from these schools; conversely, higher proportions of the 80 and above CAA applicants than the under 70 CAA applicants enrolled from Group IV high schools.

ALLOCATION

At the time of application to CUNY, individuals are asked to indicate the college they wish to attend. The extent to which applicants received their first choice of college is shown in Table 8. Again, data for 1969 are included in Table 8 for comparative purposes. (It should be kept in mind that prior to 1970 the number of applicants with CAAs below 70 comprised a small proportion of CUNY applicants.) Since 1970, the proportion of applicants allocated to their first choice college has been highest among those who applied to community colleges and among those who had 80 and above CAAs. The proportion of senior college applicants allocated to the college of their first choice has declined, in total and especially among those with 80 and above CAAs, since 1970,[7] although it still exceeds the proportion allocated their first choice in 1969.

ALLOCATION-ENROLLMENT

Data bearing on the relationship between allocation to first choice college and enrollment is provided in Table 9. In each year, higher enrollment proportions are exhibited by applicants who were allocated to their first choice college than those who were not. These differences are greater among community college applicants than senior college applicants. Among those allocated to their first choice college, a slightly higher proportion of community college than senior college applicants enrolled. Among those not allocated to their first choice college, a higher proportion of senior college than community college applicants enrolled.

CONCLUSION

This report has presented data of interest to university decision-makers. Several of the findings, especially on the increase in application and enrollment among those with low CAAs and among those from predominantly minority and low median family income areas, are consistent with previously reported findings.* Unfortunately, the full implications of these findings for university policy are limited by the descriptive nature of the data. Information on applicant

awareness, preceptions, motivations, plans, and attitudes would permit more sophisticated -- and more meaningful and more useful -- analyses of the data.

FOOTNOTES

1. Data on applications were provided by the University Applications Processing Center (UAPC); data on enrollment were provided by the Office of University Management Data (OUMD). The two data sets were then merged and tabulated by the OPPR.

2. The college admissions average (CAA) is computed from grades received in the following high school subjects: English, foreign language, mathematics, science, and social studies.

3. Data on race-ethnicity and family income are not part of the students' record. In order to get some indication of these attributes, data from the 1970 U.S. Census were used to categorize applicants' residential areas (ZIP codes) according to the predominant race-ethnicity and median family income. The income categories were: High, $\geq$\$12,000; Middle, $\geq$\$8,000 $<$\$12,000; Low, $<$\$8,000. Applying the 1970 Census data to these areas in the years 1971 through 1974 may entail additional inaccuracies.

4. Data were available for public high schools in New York City describing the average score their students attained on the State Regents Scholarship Examination. These schools were ranked and classified: Group I schools had the highest average scores and Group IV schools had the lowest average scores. The classification of high schools for 1970, 1971, and 1972 applicants was based on the scores of students taking the exam in Fall 1971 (June 1972 graduates); data for Fall 1969 and 1970 were not readily available. The classification of high schools for 1973 applicants was based on Fall 72 student scores (or June 1973 graduates); the 1974 classification was based on Fall 73 student scores (or June 1974 graduates). Data were missing for several schools and the proportion of students taking the examination varied from school to school. The classification of NYC public high schools was developed as a descriptive tool for research purposes only.

5. As may be noted in Appendix A, the proportions of applicants that enrolled decreased from 1970 to 1971 and 1972, increased in 1973, and in 1974 approached the 1970 levels. The 1971-1972 decline was a result of applications growing faster than enrollments.

6. This finding may be influenced by the allocation of students from predominantly minority areas to the SEEK programs at the senior colleges.

7. The proportion of applicants allocated to the college of their first choice dropped sharply from 1970 to 1971. This phenomenon may be a result of adjustments in the allocation process for that year.

* In the few cases where the number of applicants among June graduates exceeds the number of June graduates, the percentage is reported as 100%. This discrepancy may be due to the data being derived from different sources. The numbers of June graduates were provided by the New York City Board of Education. Data on applicants and enrollees were provided by the University Applications Processing Center.
